

HOW TO APPLY MAGPAINT® BLACKBOARD PAINT

Blackboard Paint can be used on any hard and flat indoor surface. For best results, use as a top coat on top of Magnet Paint to create a truly interactive surface. Perfect for children's bedrooms and playrooms, retail displays and menu boards in restaurants and cafes.

1 PREPARE SURFACE FOR APPLICATION

- Before sanding make sure your wall is prepared by removing any uneven or peeling areas of paint.
- Clean the surface. Ensure all dust and grease is removed with a damp cloth.
- Protect your surroundings with sheets and mask off the areas around your surface to help reduce the risk of stray paint.

2 PRIME THE SURFACE

- MagPaint® can be applied directly on top of existing emulsion. **HOWEVER**, irregular or highly absorbent surfaces such as glass, wood, stone, metal, plastic, melamine and concrete, will require a water-based primer before applying the Magpaint®.

3 PREPARE EQUIPMENT

- We recommend you use a clean painting tray to avoid any contamination of the paint, as this will affect the quality of the finish.
- MagPaint® should be applied using a short nap roller that has been cleaned with water to remove any loose hairs and fibres.
- Mix the MagPaint® thoroughly to ensure the iron particles are fully mixed in with the paint.
- **NEVER MIX MAGPAINT® WITH ANOTHER PAINT!**

4 APPLICATION

- Apply the MagPaint® ensuring the roller is covered with plenty of paint.
- Paint the surface evenly in vertical lines. You should avoid using brushes and overlapping the paint.
- Apply three coats ensuring the paint has dried in between applications.
- Leave the final coat for 24 hours before applying your top coat of emulsion.

Use this as a top coat over Magnetic Paint to create a magnetic chalkboard. By combining the two you can create a magnetic chalkboard finish of any size or shape you can imagine. This water-based paint is easy to apply with a short nap roller. It has no smell and is non-toxic.
